

LABEL CONVERTER MATERIAL TYPES

Standard Void

- Our premiere product offers the best protection at the most affordable price. This material shows evidence of tampering from -90 to +80 degrees Celsius.
- Once voided the material leaves behind a tacky void residue on the substrate it was adhered to.
- Perfect for use on: coated paperboard, glass, plastic, metal.
- Industries: pharmaceutical packaging, aviation, consumer goods packaging.

Dry Peel Void

- Our Dry Peel Void Material was designed specifically for use on corrugated surfaces and uncoated paper products.
- When the label is removed Dry Peel Material leaves behind a non-stick surface displaying the void message. The label cannot be re-applied.
- Perfect for use on corrugated and uncoated paper products
- Industries: wholesale general packaging, supply chain protection

Airline Baggage Tag

- This material has been designed to add much needed security to the airline sector.
- Our material adds tamper evident protection to the standard baggage tag label
- It is not possible to remove the baggage tag without showing signs of tampering, thereby ensuring the tag is on the luggage it was originally applied to
- Can be produced with our Dry Peel and Standard Void options
